Manatt Health is a multidisciplinary team of professionals who through deep substantive knowledge and teamwork, support clients seeking to transform America's health system by expanding coverage, increasing access and creating new ways of organizing, paying for and delivering care.

Interdisciplinary team with over 60 professionals with expertise in:

- Medicaid expansion and implementation strategies
- Multi-payer payment and delivery system reform and financing
- Provider risk-bearing strategies, including formation of ACOs and provider-sponsored plans
- Mergers, acquisitions, joint ventures
- Corporate structure and governance
- Privacy and data sharing
- Health information exchange, health IT
- Regulatory analysis and compliance

Outline

Background

Big Picture: The Marketplace

Deeper Dive: Advance Premium Tax Credits

Deeper Dive: Cost-Sharing Reductions
**Marketplace:**
An online portal where people can shop for health coverage, compare plans, and see if they qualify for financial assistance.

**Qualified Health Plan (QHP):**
Private health plans offered on the Marketplace. They must cover a core package of benefits, known as essential health benefits, like prescription drugs and mental health.

**Actuarial Value (AV):**
The percentage of enrollees’ health care costs that an insurance company is expected to cover.

**Metal Levels:**
Type of QHPs offered on the Marketplace that vary in their Actuarial Value. They include Platinum, Gold, Silver, and Bronze.

**Insurance Affordability Programs (IAPs):**
Programs designed to make it more affordable to enroll in coverage and to use health care services. Includes premium tax credits, cost-sharing reductions, Medicaid and CHIP. A single application may be submitted to the Marketplace for all IAPs.

**Premiums:**
What a person must pay in order to enroll in health coverage. Premiums are usually paid monthly to the insurer.

**Cost-Sharing:**
What a person must pay when they use health services, such as doctors or hospital visits. These costs are often called “out-of-pocket” costs. Cost-sharing represents only part of someone’s overall costs for health care, which often also will include premium payments.
The Affordable Care Act creates new coverage options by expanding Medicaid and creating Health Insurance Marketplaces for Qualified Health Plans (QHPs).

The law includes several programs that help low- and moderate-income people purchase health insurance coverage. Together, they are known as insurance affordability programs.

**Advance Premium Tax Credits (APTC)**
- NEW federal program that uses tax credits to reduce premium costs for QHP enrollees
- For people who meet financial criteria and don’t have access to other coverage
- Can be paid in “advance” to provide immediate help in paying premiums.
- IRS reconciles over/under payments of advance premium tax credits when people file taxes

**Cost-Sharing Reductions (CSR)**
- NEW federal program
- Helps reduce out-of-pocket costs for enrollees in QHPs
- Payments are made directly to issuers to reduce deductibles, co-insurance and/or copayments (out of pocket costs)

**Medicaid**
- Existing federal-state health insurance program for low income people
- Expanded to more low-income adults by the ACA. States can opt out of expansion
- Provides comprehensive health care benefits
- Minimal out-of-pocket costs

**Children’s Health Insurance Program (CHIP)**
- Existing federal-state health insurance program for low- and moderate-income children
- Provides comprehensive health care benefits
- Modest out-of-pocket costs
The type of health coverage a person receives is based on their income (measured as percent of the FPL) and other factors, like citizenship.

**Children’s Health Insurance Program (CHIP)**
Eligibility levels vary by state

**Qualified Health Plans**

**Medicaid**
Eligibility levels vary by state

**Employer-Sponsored Coverage**

*Cost-sharing reduction eligibility is technically provided to people 0% - 250% FPL.*

Advance Payments of Premium Tax Credits & Cost Sharing Reductions | Manatt, Phelps & Phillips, LLP
Eligibility for insurance affordability programs falls along a continuum based on income, age, and other eligibility factors.

On this continuum, income is measured as percent of the federal poverty level, or FPL.

Children qualify for Medicaid and CHIP at higher income levels than their parents. As a result, families may have members in more than one insurance affordability program.

**Continuum of Insurance Affordability Programs for Adults**

(Figure illustrates 2013 thresholds for single adults in a state that expands Medicaid; thresholds differ for children)

<table>
<thead>
<tr>

<tbody>
<tr>
<td>$0</td>
<td>$11,490</td>
<td>$22,980</td>
<td>$34,470</td>
<td>$45,960</td>
</tr>
</tbody>
</table>

**MEDICAID**

The ACA expands Medicaid to 133% FPL but states can elect to not implement the coverage expansion.

**ADVANCE PREMIUM TAX CREDITS**

Cost-Sharing Reductions (CSR) are for individuals below 250% FPL. In practice, few individuals below 100% are expected to enroll in QHPs because they will lack premium support.

**COST-SHARING REDUCTIONS**

Advance Premium Tax Credits (APTC) are for individuals 100% to 400% FPL.
The federal poverty level is used to identify who qualifies for insurance affordability programs.

The Marketplace and Medicaid agency use different timelines to determine federal poverty level.
Outline

- Background

**Big Picture: The Marketplace**

- Deeper Dive: Advance Premium Tax Credits
- Deeper Dive: Cost-Sharing Reductions
The Health Insurance Marketplace offers a “one stop shop” for consumers to compare health insurance plans, apply for coverage (with or without financial assistance), and enroll.

Each state can establish its own Marketplace or rely on the federal government to operate one on its behalf.
What’s Offered on the Marketplace?

- QHPs are health insurance plans offered by private issuers on the Marketplace
- All QHPs must offer the same set of core benefits known as “essential health benefits”

**Metal Levels:** The Marketplace offers four categories of QHPs, known as “Metal Levels”. The metal levels are distinguished by the share of healthcare costs QHPs are expected to cover.

- **Platinum:** Expected to cover 90% of the cost of benefits on average (90% AV)
- **Gold:** Expected to cover 80% of the cost of benefits on average (80% AV)
- **Silver:** Expected to cover 70% of the cost of benefits on average (70% AV)
- **Bronze:** Expected to cover 60% of the cost of benefits on average (60% AV)

**“Actuarial Value” (AV):** The percentage that insurance companies will pay on average for the health services consumers use. Consumers will have to pay the balance through co-insurance, co-pays, and deductibles.

**Other Plan Options:** The Marketplace also offers non-Metal plans, such as catastrophic plans. ATPCs cannot be applied to catastrophic plans.
Metal Levels and Premiums

- Premiums are higher for plans that pay more out-of-pocket medical costs (Platinum, Gold).

- Platinum plans have the highest premiums but the lowest out-of-pocket costs. This means the plan will cover more of the costs when a consumer uses services.

- Bronze plans have the lowest premiums but highest out-of-pocket costs. This means the consumer will have to pay a higher share of costs when he/she uses services.

- People who qualify for a cost-sharing reduction must enroll in a Silver plan to take advantage of it.

**METAL LEVEL PLANS**

- **Platinum**: Expected to cover 90% of the cost of benefits on average (90% AV)

- **Gold**: Expected to cover 80% of the cost of benefits on average (80% AV)

- **Silver**: Expected to cover 70% of the cost of benefits on average (70% AV)

- **Bronze**: Expected to cover 60% of the cost of benefits on average (60% AV)
Step-by-Step to Get Help Paying for QHP

1. **APPLIES FOR HEALTH INSURANCE**
   - Sheena is 34 yrs old.
   - Makes $22,000 a year (~200% FPL)
   - Applies for health coverage online through her marketplace.

2. **PROVIDES INFORMATION ON FAMILY CHARACTERISTICS**
   - Application asks for information on income, household size, access to coverage and other data elements needed to evaluate eligibility.

3. **MARKETPLACE DETERMINES ELIGIBILITY FOR FINANCIAL ASSISTANCE**
   - Marketplace checks these data elements to see if she qualifies for an insurance affordability program.
   - In this case, tells her how much she gets in APTC and that she qualifies for CSR.

4. **CHOoses A HEALTH PLAN**
   - Sheena takes her APTC and picks a plan.
   - The APTC helps pay her premiums.
   - In this case, she chooses a Silver plan, so she also gets cost-sharing reduction that reduces her out-of-pocket expenses.

5. **REPORTS CHANGES**
   - During the year, Sheena must tell the Marketplace if she experiences a change in her circumstances, like if she has a baby or loses a job.

6. **FILES TAXES; RECONCILES AMOUNT OF TAX CREDIT**
   - When Sheena files her taxes at the end of the year, the IRS compares the income information she provided on her application to her actual income for the year.
   - It gives her an additional tax credit if her income was lower than expected OR increases her tax bill if it was higher than expected.
Process for How Government Pays QHP Issuers

Marketplace
- Marketplace sends simultaneous notification to HHS and QHP issuer notifying them of an individual’s APTC/CSR eligibility.
- HHS does not yet have system to receive information from the FFM or each SBM.

QHP Issuer

HHS
- Treasury sends subsidy amount to QHP issuer on monthly basis.

Current Workaround
- QHP issuer to send HHS a password-protected Excel spreadsheet monthly with enrollees and their eligible subsidies.
- HHS will reconcile these amounts once it develops an electronic system to gather this information.

Treasury
- HHS communicates APTC/CSR eligibility with Treasury.
How APTC is Used to Shop for Plans

After the Marketplace determines Sheena’s eligibility for APTC/CSR, she will be told the maximum amount of APTC she can receive.

Sheena can then shop around for different plans.

If she chooses a less expensive plan, the APTC will cover more of the premium costs. If she chooses a more expensive plan, the APTC will cover less of the premium costs, and she will need to pay more on her own.

As she shops, Sheena may want to consider both her premium costs and her out-of-pocket costs under various plans.
### Let’s See How it Works

- Sheena makes $22,980 a year, or 200% FPL.
- Her maximum APTC is $559/month.
- She is deciding between three plans:
  - Plan A: $900/month
  - Plan B: $620/month
  - Plan C: $500/month

#### Plan Premium – APTC

<table>
<thead>
<tr>
<th>Plan</th>
<th>Premium</th>

<th>Sheena Owes</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>$900/mn</td>
<td>$559/mn</td>
<td>$341/mn</td>
</tr>
<tr>
<td>B</td>
<td>$620/mn</td>
<td>$559/mn</td>
<td>$61/mn</td>
</tr>
<tr>
<td>C</td>
<td>$500/mn</td>
<td>$559/mn</td>
<td>$0*</td>
</tr>
</tbody>
</table>

*if Sheena chooses a plan that costs less than the APTC, she cannot collect leftover “savings”
Outline

- Background
- Big Picture: The Marketplace
- Deeper Dive: Advance Premium Tax Credits
- Deeper Dive: Cost-Sharing Reductions
What is a Premium Tax Credit?

Available to:
- Low- and moderate- income families who meet financial criteria and other eligibility standards.

Two ways to take it:
- **In Advance:** Families can receive the tax credit on an “advance” basis when they buy their QHPs. Known as an “advance premium tax credit,” the credit makes sure that families can receive help without having to wait to file taxes at the end of the year.
- **At Tax Filing Time:** Families can also front the money to pay their premiums and receive the credit when they file their tax returns. When taken at tax filing, known as a “premium tax credit”.

Can be used on any metal level plan:
- *If buy a relatively expensive plan,* the family will need to contribute more of its own funds toward the premium.
- *If buy a cheaper plan,* the family will have more of its costs covered by the APTC. The APTC cannot exceed the cost of the actual plan.

New federal tax credit that will help subsidize the cost of purchasing a QHP on the Marketplace.
Who’s Eligible For Tax Credits?

Individuals are eligible for an APTC if they:

- Enroll in a QHP
- Have projected annual income between 100% - 400% FPL (with exception for legal immigrants)
- Lack access to other coverage that meets some basic standards (“minimum essential coverage”)
- Meet various tax-based requirements
  - Plan to file a federal tax return
  - If married, plan to file a joint tax return
  - Not eligible to be claimed as a dependent on someone else’s tax return

Special Circumstances:

Households in Which Some Individuals are Not Eligible for APTC:

- It is not necessary for every household member to meet the APTC eligibility criteria. If at least one member qualifies, the household can receive tax credits on behalf of the eligible member(s)

Special Rule for Lawfully Present Individuals Below 100% FPL:

- Immigrants with incomes below 100% FPL who are lawfully present and ineligible for Medicaid because of their immigration status may be eligible for APTC
- They must also meet all of the other APTC eligibility criteria that apply to individuals with incomes >100% FPL
Minimum Essential Coverage

Basic health coverage that meets minimum standards.

Major example include:
- Individual market policies
- Job-based coverage that meets “affordability” and “minimum value standards”
- Medicare, Medicaid, CHIP, TRICARE and certain other coverage.

With a few exceptions, people are ineligible for APTC if they have access to MEC even if they are not enrolled in it.

Affordability:
- A plan is considered affordable if the person is required to contribute 9.5% of their income or less towards the plan.

Minimum Value:
- Job-based coverage provides minimum value if it pays for 60% or more of the benefits covered by the plan. Individuals must pay no more than 40%.
What Does NOT Count as Minimum Essential Coverage

These limited coverage options do not count as Minimum Essential Coverage:

- Policies that cover only a specified disease or illness (e.g. cancer-only policies)
- Medi-gap policies
- Accidental death and dismemberment coverage
- Disability insurance
- Workers’ compensation
- Coverage for employer-provided on-site medical clinics
- Limited-scope dental or vision benefits
- Long-term care benefits

You can still be eligible for an APTC if you have coverage that does not count as “Minimum Essential Coverage”
How is the Tax Credit Calculated?

Congress decided how much families are expected to contribute to their premiums. Based on this expected contribution, APTC are set at a level that allows people to purchase a relatively inexpensive Silver plan.

Steps the Marketplace Must Take to Calculate the APTC

**STEP 1**  
Determine the amount the family is expected to spend on premiums (expected contribution) given its income

**STEP 2**  
Identify the cost of the second lowest cost Silver plan (benchmark plan) for this family

**STEP 3**  
Fill the gap – after identifying a family’s expected contribution, determine how much more it needs to purchase the benchmark plan. The APTC are set at this dollar amount to “fill the gap”
How is the Tax Credit Calculated?

The **Advance Premium Tax Credit** “fills the gap” between what a family is expected to contribute to health insurance and the cost of a benchmark plan.

The **cost of the benchmark plan** is the cost of the second lowest cost Silver plan for eligible family members adjusted to reflect selected characteristics of the family, such as age and size.

The family’s **expected contribution** is set on a sliding scale based on income. It varies from 2% of income at 100% FPL to 9.5% at 400% FPL.

The expected contribution is not adjusted to reflect any additional costs a family might have for buying other insurance, such as employer-based coverage or CHIP.
**How is Benchmark Cost Calculated?**

<table>
<thead>
<tr>
<th>TO CALCULATE THE BENCHMARK COST</th>
<th>Tax Credit Amount</th>
<th>Benchmark Cost</th>
<th>Household Contribution</th>
</tr>
</thead>
</table>

**STEP 1**
Identify the cost of the second lowest cost Silver plan (benchmark plan) in the geographic area in which the household resides.

**STEP 2**
Adjust the cost to reflect the age of the APTC-eligible members; if a family includes older members, it increases the cost of the benchmark plan and, thus, the size of an applicant’s APTC.
How is the Family’s Expected Contribution Calculated?

Families are expected to contribute between 2% and 9.5% of their income towards QHP premiums. The percentage they are expected to contribute is based on a sliding scale.

To find contribution amount, the Marketplace must figure out:

1. Who’s in the family?
2. How much income does the family have?
3. What is the family’s income as a percentage of the federal poverty level?

### Premium Credits by Income Under Health Reform

</table>
What Happens When Family Members Have Access to Other MEC?

The family’s **expected contribution** is not adjusted to reflect any other costs a family might have for buying insurance, such as employer based coverage or CHIP.

### Access to coverage outside of Marketplace

The Smiths make $94,200 each year (400% FPL). Their expected contribution is 9.5%, or **$746 per month**.

Ms. Smith has health coverage through her job, which costs **$500 per month**. No other Smith family members have access to MEC.

\[
\text{Total Premium Costs} = \text{Expected Contribution} + \text{Employer-based Coverage} = 746 + 500 = 1246
\]

**$1,246 per month**

### No access to coverage outside of Marketplace

The Smiths make $94,200 each year (400% FPL). Their expected contribution is 9.5%, or **$746 per month**.

Ms. Smith does not have access to coverage through her job, so she pays **$0 per month**. No other Smith family members have access to MEC.

\[
\text{Total Premium Costs} = \text{Expected Contribution} = 746
\]

**$746 per month**
Who’s in Your Family?

**HOUSEHOLD SIZE**

- The Marketplace uses IRS rules to decide who is in a household.

- **General Rule:** A taxpayer’s household includes the individuals for whom he/she claims a deduction for a personal exemption.

- **The Details:** A taxpayer may claim a personal exemption deduction for:
  - Himself/herself
  - His/her spouse
  - His/her tax dependents

- **Let’s Take this Example:**
  - If a single mother with two children plans to claim both of them as dependents when she files her taxes, her household size = 3 (herself plus the two children)
  - If her ex-husband plans to claim the children on his tax form, her household size = 1 (just herself)
How Much Income Does Your Family Have?

INCOME

Whose Income Counts:
- Add up the income of all household members who must file taxes

What Income Counts:
- APTC and CSR rely on a measure of income known as “Modified Adjusted Gross Income,” or “MAGI”
- IRS establishes the rules for what counts as MAGI for APTC/CSR purposes
- Two ways to get a person’s projected annual income:
  - Option 1: Pull off last year’s tax return (Form 1040)
    - Only works if no change in circumstances
    - Line 37 + (if applicable) Line 20A + Line 7 + Line 8b
  - Option 2: “Construct” their MAGI using IRS rules and definitions based on information provided on the application

Adjusted Gross Income (AGI)
+ Any Social Security benefits (not already included in AGI)
+ Tax Exempt Interest
+ Foreign Earned Interest

= MAGI
### Types of Income Included in MAGI

<table>
<thead>
<tr>
<th>Income Counted</th>
<th>Income NOT Counted</th>
</tr>
</thead>
<tbody>
<tr>
<td>➢ Taxable wages/salary (before taxes are taken out)</td>
<td>➢ Child support received</td>
</tr>
<tr>
<td>➢ Self-employment (profit once business expenses are paid)</td>
<td>➢ Supplemental Security Income (SSI)</td>
</tr>
<tr>
<td>➢ Social Security benefits</td>
<td>➢ Workers’ compensation payments</td>
</tr>
<tr>
<td>➢ Unemployment benefits</td>
<td>➢ Veterans’ benefits</td>
</tr>
<tr>
<td>➢ Alimony received</td>
<td>➢ Gifts</td>
</tr>
<tr>
<td>➢ Most retirement benefits</td>
<td></td>
</tr>
<tr>
<td>➢ Interest (including tax-exempt interest)</td>
<td></td>
</tr>
<tr>
<td>➢ Post investment income, such as interest and dividends</td>
<td></td>
</tr>
<tr>
<td>➢ Rental or royalty income (profit after subtracting costs)</td>
<td></td>
</tr>
<tr>
<td>➢ Other taxable income, such as canceled debts, court awards, jury duty pay not given to an employer, cash support, and gambling, prizes, or awards; net capital gains (profit after subtracting capital losses); and foreign earned income</td>
<td></td>
</tr>
</tbody>
</table>

### Deductions

- **Allowed:**
  - Tax deductions allowed on page 1 of the 1040 Form. For example: student loan interest paid; selected higher education expenses (tuition and fees); self-employment tax; alimony payments

- **Not Allowed:**
  - States’ current Medicaid deductions
  - Itemized deductions (like charitable contributions)
Let’s Put it All Together

1. **Who’s in the Bailey family?**
   
   Mr. Bailey files taxes and lists his wife and two children as dependents. The Bailey family size = 4.

2. **How much income does the Bailey family have?**
   
   Mr. Bailey and Ms. Bailey have a combined projected annual MAGI income of $58,875

3. **What’s their FPL?**
   
   Their FPL is 250%, which qualifies them for APTC and CSR!

---

**BENCHMARK COST:** The total premiums for the benchmark plan that would cover all of the Bailey family members is $17,000 a year.

**EXPECTED FAMILY CONTRIBUTION:** At 250% FPL, The Baileys are expected to contribute 8.05% of their income, or $4,739 a year (8.05% x $58,875 = $4,739).

Let’s calculate their APTC:

- **ANNUALIZED APTC =** benchmark premium ($17,000) - household contribution ($4,739) = $12,261 per year
- **MONTHLY APTC =** $12,261 / 12 months = $1,022 per month. APTC is paid directly to the Insurer; the Baileys must pay the rest, or $395/month ($4,739 / 12 months = $395/month).
Factors that Impact the Benchmark Plan Cost

**REMEMBER:** The size of the tax credit equals the Silver benchmark plan minus a family’s expected contribution.

The higher the cost of the benchmark plan, the larger the APTC.

Benchmark plan costs will change based on where the family lives, the ages of the family members seeking coverage, and the number of household members enrolled in a QHP.

Even when the benchmark plan changes, the family’s expected contribution amount remains the same.

But, the plan costs do not vary by:

- **Tobacco**

Benchmark plan costs vary by:

- **Geography**
- **Age**
- **Family Size**
How Does Geography Impact APTC?

Where you live matters!

- Issuers can vary plan costs by defined geographic areas.
- All issuers need to follow these geographical boundaries when setting rates, but the issuer can decide how much they want to charge per area.

Approved Rating Areas:

States are divided into rating areas by county, zip code, etc.

Example: CA has 9 rating areas, which are split among counties and zip codes.

Rating areas include:
- Alpine
- Calaveras
- Santa Cruz
- Fresno
- 912 (zip)
- 917 (zip)
Meet John. He is 60 and lives in California.
Income: $22,980 (200% FPL)
Expected Contribution: 6.3% or $121/month

If John lived in Region 1 (Alpine, Del Norte, etc.)
- Benchmark Plan: $676/month
- John’s Contribution: $121/month
- APTC = $555/month

If John lived in Region 4 (San Francisco)
- Benchmark Plan: $792/month
- John’s Contribution: $121/month
- APTC = $671/month

These rates were selected for illustrative purposes. They were adapted from the 6/28/13 Covered California Health Insurance Plans Brochure.
How Does Age Impact APTC?

How old you are matters!

- Issuers can vary plan costs by age
- HHS publishes “age rating curves” for adults. The curve shows the amount (rate) that rates vary by age
- The ratio can’t be higher than 3:1 and states can pick a lower ratio. This means that older people can never pay more than 3 times as much for coverage as younger people

<table>
<thead>
<tr>
<th>Approved Age Ratings:</th>
</tr>
</thead>
<tbody>
<tr>
<td>21 years old</td>
</tr>
<tr>
<td>Rating factor = 1.0</td>
</tr>
<tr>
<td>This means they are the reference point</td>
</tr>
<tr>
<td>49 years old</td>
</tr>
<tr>
<td>Rating factor = 1.7</td>
</tr>
<tr>
<td>This means they will pay 1.7 times as much as a 21-year old</td>
</tr>
<tr>
<td>65+ years old</td>
</tr>
<tr>
<td>Rating factor = 3.0</td>
</tr>
<tr>
<td>This means they will pay times as much as a 21-year old</td>
</tr>
</tbody>
</table>
Impact of Age on APTC Size

### Meet Martin, Age 29
- **Income:** $22,980 (200% FPL)
- **Expected Contribution:** $1,448
- **Base Premium (before Age Rate):** $3,000
- **Age Rate:** 1.19

- **Premium:** $3,570 ($3,000 x 1.19)
- **Benchmark Plan:** $3,570
- **Martin's Contribution:** $1,448
- **APTC:** $2,122

### Meet Whitley, Age 63
- **Income:** $22,980 (200% FPL)
- **Expected Contribution:** $1,448
- **Base Premium (before Age Rate):** $3,000
- **Age Rate:** 2.95

- **Premium:** $8,850 ($3,000 x 2.95)
- **Benchmark Plan:** $8,850
- **Whitley's Contribution:** $1,448

How does Smoking Impact APTC?

Whether you smoke matters!

- Plans can charge people more for premiums if they smoke (unless a state prohibits it). A state can allow QHP issuers to charge a smoker up to 1.5 times as much as a non-smoker.

- But, tobacco use is NOT taken into account when calculating the benchmark plan. As a result, it does not impact tax credit size.

- This means that smokers must use their own money to pay for the higher premium costs associated with their smoking.

Impact of Smoking on Plan Costs:

- Premium
- APTC
- Plan cost

Advance Payments of Premium Tax Credits & Cost Sharing Reductions | Manatt, Phelps & Phillips, LLP
Impact of Smoking on Plan Spending

Meet Joanne and Samantha. They are adult sisters who each select the same Marketplace plan. Joanne does not smoke, but Samantha does. Both work at a pizza shop and make $17,235 (150% FPL). Because Samantha smokes, the health plan can charge her more than Joanne for premiums. In this example, they charge her 1.5 times as much as Joanne.

Joanne:
- Premium = $4,000
- Benchmark Plan = $4,000
- APTC = $3310.60
- Joanne’s Contribution = $689.40

Samantha:
- Premium = $6,000 ($4,000 x 1.5)
- Benchmark Plan = $4,000
- APTC = $3310.60
- Samantha’s Contribution = $689.40
- Samantha’s Additional Contribution for Smoking = $2,000

KEY
- Contribution
- APTC Amount
- Smoking Contribution

Smoking does not impact APTC, so use base premium ($4,000) to calculate APTC.
End of Year Reconciliation

Reconciliation: People who receive an APTC are obligated to file taxes; when they do, the IRS conducts a “reconciliation” to ensure they received the right amount of premium tax credit.

Step-by-Step Process for Reconciliation:

**STEP 1**
APTC recipients file their annual taxes

**STEP 2**
IRS uses their tax return income to determine the appropriate size of their premium tax credit for the prior year

**STEP 3**
IRS compares the size of the amount they already received in APTC to their actual premium tax credit

- If they received more APTC than their income tax data indicates they qualify for, they must repay the excess (up to a limit). This might happen if someone gets a salary increase in the middle of a year and forgets to report it.
- If they receive less APTC than their income tax data indicates they qualify for, they receive a tax refund (or offset to any tax liability). This might happen if someone loses a job in the middle of a year and forgets to report it.

If the IRS finds that the individual has to repay credits, there is a cap on the amount they have to pay back. The cap is a sliding scale based on income.
Reducing the Repayment Risk

Strategies Available to Consumers:

- **PROVIDE ACCURATE PROJECTIONS**: When applying for an APTC, answer any questions about your projected income and family size as accurately as possible.
- **REPORT CHANGES**: Promptly report any changes in income or family size that occur in the midst of the year; this allows Marketplaces to adjust your APTC to the right level.
- **TAKE LESS APTC**: Consider taking less than the full APTC for which you qualify or even waiting until you file your tax return to take advantage of the premium tax credit if you can afford to “front” the money.

Example:

For example, consider Suzie who qualifies for an APTC of $100 a month. She can decide to take an advance premium tax credit of $50 a month. If she does, she’ll also receive a tax refund of $600 at the end of the year when she files taxes, if it turns out $100 a month was the correct level of APTC. This helps protect her against the risk that she’ll owe money to the IRS at the end of the year if she underestimated her income.
APTC may only be used for essential health benefits. They can’t be used to subsidize the cost of add-ons or optional benefits, like adult dental coverage. Also cannot be used for certain abortion coverage.

- Example: If a plan costs $15,000 BUT $1,000 is attributable to an adult dental add-on, then the APTC will be calculated as if the plan costs $14,000 ($15,000 - $1,000).

The amount of APTC can’t be more than the cost of the plan.
Meet Henry. His income is 200% FPL. When he enrolls in a QHP, he is entitled to an APTC. See what happens if he does not pay his premium.

Oct. 1, 2013
Henry enrolls in a QHP during open enrollment. Henry pays his premium for January.

Jan. 1, 2014
Henry’s coverage becomes effective

Mar. 1, 2014
Henry did not pay his March premium. Because he paid at least one month of his premium (Jan & Feb), he receives a 3 month grace period.

3-month Grace Period

June 1, 2014
Henry did not pay his premium for the last 3 months. His grace period ends.

June 1, 2014
QHP issuer continues to receive APTC/CSR from Treasury.

Issuer may terminate coverage after 3 months of premium non-payment but must:
- Provide 30-days notice prior to termination
- Return any APTC collected during 2nd and 3rd months (April and May).

QHP issuer must send notice to provider and may pend provider claims during 2nd and 3rd months (in example, April and May). (Providers may seek payments for services during 2nd and 3rd months.)

Henry may incur tax liability for March APTC; must wait until next open enrollment to reenroll; faces penalty.
Outline

- Background
- Big Picture: The Marketplace
- Deeper Dive: Advance Premium Tax Credits
- Deeper Dive: Cost-Sharing Reductions
Families are eligible to receive cost-sharing reductions (CSR) to help with out-of-pocket costs (not premiums) if their income is below 250% FPL.

The amount of help provided by a CSR depends on a person’s income – more substantial help is available to people at lower income levels.

People who apply for insurance affordability programs are automatically assessed for CSR.
After payment of premium and plan enrollment, cost-sharing reductions help people with their out-of-pocket costs like deductibles, coinsurance and copayments.

Plan Obligations for CSR-Eligible Enrollees

**Marketplace**
Sends QHP issuer electronic enrollment transaction indicating individual’s plan selection and eligible CSR level

**QHP Issuer**
Receives individual’s plan selection and enrolls individual according to CSR level
Must assign enrollee new cost-sharing variant and credit cost-sharing toward new plan if Marketplace notifies of CSR eligibility change midyear

**Enrollee**
Receives notification and refund of any incorrectly paid cost-sharing

If QHP issuer fails to enroll individual in correct CSR level, issuer must notify enrollee within 45 days and provide refund

Note: There is no obligation for enrollee to repay CSRs if the Marketplace determines individual is no longer eligible for CSRs.
U.S. Government Pays for Reduced Cost-Sharing

**Benefit Year**

- Treasury
  - Treasury pays a per member per month amount *each month* to QHP issuers reflecting estimated CSRs

- QHP Issuer

**Benefit Year End**

- Each QHP issuer reports the actual CSRs provided
  - For 2014-2016, issuers may use “standard” or “simplified” method to determine CSRs provided
- Treasury reconciles those amounts with the estimated amounts paid to the issuer during the benefit year
Who’s Eligible For CSR?

Individuals are eligible for a CSR if they:

- Meet the eligibility criteria for APTC
- Anticipate annual household income below 250% FPL
- Enroll in a Silver QHP

Special Circumstances:

Special Rule for Families with Members who Qualify for Different CSR Levels:

- In families where members qualify for different levels of CSR (e.g. one American Indian (AI) member and one non-AI member), the “least common denominator” rule is used.
- This means that everyone qualifies only for the CSR variation available to the member who qualifies for the least generous CSR.
Special Rules for American Indian/Alaska Native Populations

No Cost-Sharing Obligation Below 300% FPL

- AI/AN applicants below 300% FPL are exempt from out-of-pocket costs. They are not required to enroll in a Silver plan to qualify for this “no cost-sharing” protection.

Limited Cost-Sharing Obligation Above 300% FPL

- AI/AN applicants above 300% FPL are exempt from cost-sharing for services provided by the Indian Health Service, an Indian Tribe, Tribal Organization, or Urban Indian Organization or through referral under contract health services.
